TAHAP I MEMBUAT SIMULASI DAN SKEMA PROJECT

CARA KERJA

A. SECURITY DETECTOR

Bekerja sepanjang waktu, yaitu: mendeteksi gerakan menggunakan PIR Sensor, lalu memicu Arduino untuk memutar audio melalui DFPlayer Mini yang terhubung ke Speaker.

B. TEMPERATURE DETECTOR

Bekerja sepanjang waktu, yaitu: DHT11 mengukur suhu dan kelembaban dari lingkungan, Arduino membaca data dari DHT11 serta data suhu dan kelembaban yang diperoleh ditampilkan pada LCD I2C.

C. FIRE DETECTOR

1. KONDISI SEBELUM ADA API:

- Diodaphoto dan Flame Sensor tidak bekerja.
- Normal Indicator Light menyala.
- Accident Indicator Light tidak menyala.
- Alarm dan kipas pemadam tidak bunyi.
- LCD menyala.

2. KONDISI SETELAH ADA API:

- Bila ada api di suatu area, Diodaphoto mengirim sinyal ke Flame Sensor dan diteruskan ke Arduino. Selanjutnya Arduino memerintahkan:
- Normal Indicator Light tidak menyala.
- Accident Indicator Light menyala.
- Alarm dan kipas pemadam bunyi.
- LCD menyala.
- -Modul SIM800L mengirimkan sinyal SMS & CALL ke Handphone kita.

D. PEMASANGAN DIODAPHOTO PADA SETIAP RUANG:

- Akan bekerja pada kondisi point C.2

E. PEMASANGAN SENSOR MO-2:

- Sensor akan terus bekerja dan bila mencapai angka 1025 akan mengirim sinyal ke arduino dan selanjutnya Arduino akan memerintahkan seperti pada point C.2
